ABSTRACT

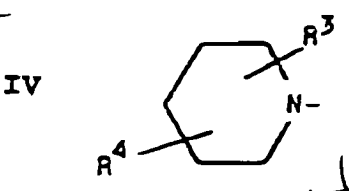

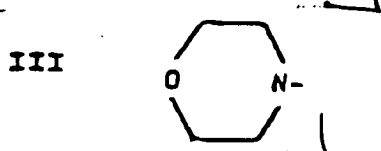

A compound of formula (I)

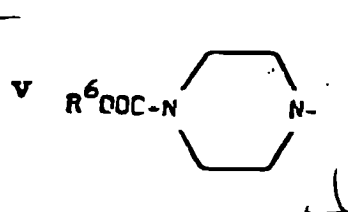

wherein  $R^1$  and  $R^2$  each represents a hydrogen atom or an alkyl group,  $Z$  represents a ring selected from:

in which  $n$  represents 4, 5 or 6;

in which  $R^3$  represents hydrogen or an alkyl group and  $R^4$  represents an alkyl, methoxy, benzyl or  $R^5$  NHCO group,  $R^5$  being an alkyl group; and

in which  $R^6$  represents an alkyl group.

and pharmaceutically acceptable salts thereof are useful in the treatment of migraine and other conditions. They are prepared by decarboxylation of the corresponding indolyl 2-carboxylic acid.
